To Whom It May Concern:

Miss Kitty Dubielzig has been doing important (and instructive) work for us this semester as a laboratory assistant, and I am hopeful she will be able to do the same during the next academic year. Any arrangements in her class assignments that would give her unbroken intervals, mornings or afternoons, on different days of the week, would be helpful in allowing her to schedule her duties in the laboratory, and would be very much appreciated by the undersigned.

Truly yours,

Joshua Lederberg
Professor of Genetics
